

Extended Figure 1 | Cell cluster features and co-embedding of scATAC-seq and sc5nRNA-seq data.

a, Expression levels of marker genes visualized via sc5nRNA-seq signal and imputed gene activity scores from scATAC-seq. **b**, Co-embedding of single cells from each cell cluster integrating sc5nRNA-seq and scATAC-seq modalities using scDART. Cells are color-coded by the sequencing technology. **c**, Visualization of co-embedded single cells grouped into metacells using SEACell. Cells were colored according to their respective SEACell assignments. Bigger points represent the metacells.
